

Question 5. Is senior leadership supportive of MRSA prevention activities?

You indicated that you do not have the support of senior leadership. Given the many competing priorities of hospitals, having the support of leadership is key to making immediate and lasting progress with your MRSA prevention initiative. Having a member of the hospital executive leadership team oversee the initiative signals the importance of the initiative to the hospital staff.

A. Strategies to Engage Leadership:

- Understand senior leadership's perspective and priorities to tailor what and how you communicate information about this initiative. Senior leaders are essential allies in securing resources, overcoming barriers and aligning organizational priorities for your MRSA prevention activities. The American College of Healthcare Executives annual survey highlights that the top issues of immediate concern for hospital CEOs are: financial challenges, government mandates and patient safety and quality. (From Top Issues Confronting Hospitals in 2016. American College of Healthcare Executives. 2016. Accessed July 12, 2017. Available at <https://www.ache.org/pubs/research/ceoissues.cfm>)
- Appreciate that different senior leaders may have different concerns about the initiative or hospital priorities. For example, the chief nursing officer may be concerned about nursing shortages and their impact on patient outcomes, while the finance executive may worry more about how to help keep costs down. By understanding what matters to the individual, you can more effectively tailor your communication, and your requests will be more likely to gain support.
- Create a business case to help succinctly present your plan to leadership, ensure sufficient resources are available to sustain performance, summarize the goals and vision of the initiative, define how the organization will avoid errors and prepare for success and connect your MRSA prevention efforts with other safety initiatives and with organizational performance.
 - For more information on how to develop a business case, review the STRIVE Modules [BC 101](#) and [BC 102](#).
- Share monthly data and high-level progress updates with leadership. Important data to share includes:
 - Total MRSA bacteremia burden
 - MRSA bacteremia burden based on primary source infection (e.g., CLABSI, SSI, VAP, and/or VAE)
 - Hospital-associated MRSA bacteremia
 - Compliance with process measures such as hand hygiene, environmental cleaning, etc.
 - Cost savings associated with MRSA prevention efforts

B. Ways for Leaders to Show Support

- Share information about the MRSA prevention initiative in leadership and staff meetings and during staff encounters. Consider including updates and successes in hospital-wide newsletters, patient and family information, and in online communication. Make sure to emphasize that MRSA prevention efforts reflect the hospital's mission and values.
- Attend and listen to report-outs on implementation. This will help boost the improvement team's sense of purpose.
- Include staff engagement in infection prevention initiatives in hospital employee credentialing requirements.
- Encourage supervisors to provide support and backing when the improvement team encounters roadblocks.
